

Since the WHO official announcement regarding the spread of COVID-19, CS Global developed a prevention manual to avoid coronavirus contamination.

Our actions include:

- Installation of **shockproof and shatterproof acrylic cabins** in all sedans, SUV's and minivans, including armored vehicles, to ensure that the passenger compartment is totally separated from the driver. It is disinfected after each journey.
- All drivers and greeters will be wearing masks during the entire trip. All passengers must also wear mask. A **disinfection kit is offered, including a mask** in case the passenger does not have one.
- After each trip, **all areas in the vehicle are cleaned with disinfectant spray (Alcohol based with at least 70% alcohol)**. On smaller vehicles we also use the ozone disinfection system and on the larger ones, Bio Sanitization.
- We recommend that during the journey, if possible, **the windows remain open**.

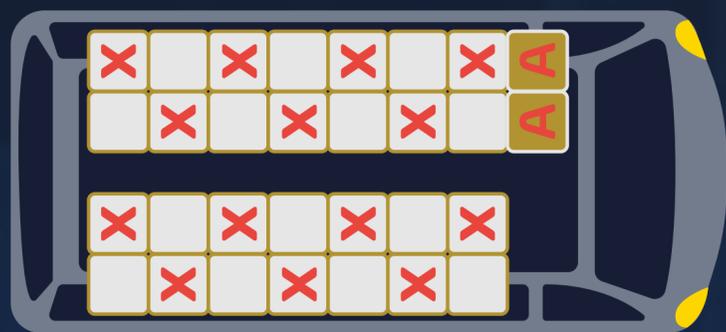

Chauffeur Services Global

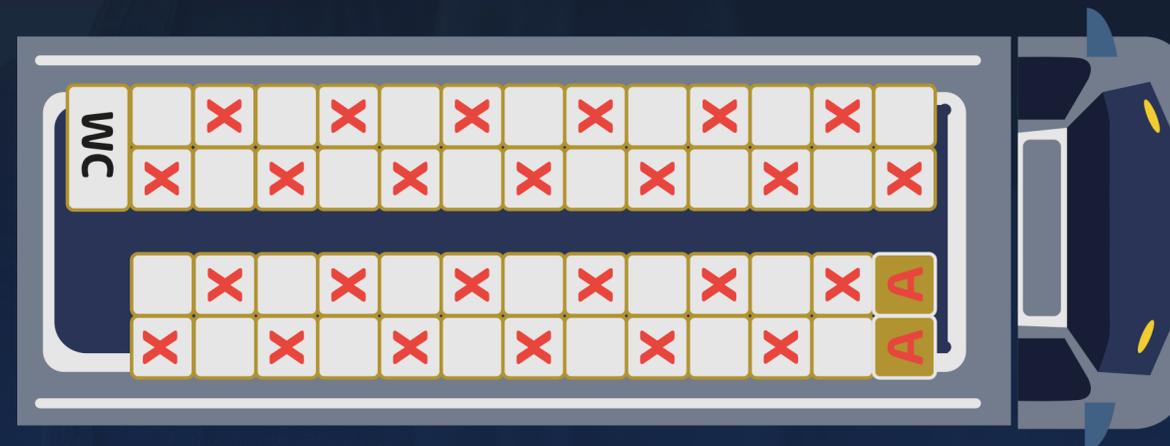

- Application of **protection caps on the seat headrest** with instruction in all vans, mini-coaches and coaches. (the material is always sanitized at the end of the journey)
- We are operating at **50% of maximum capacity in all vehicles**, providing more space, comfort and safety.
- Use of a **digital thermometer** to measure the temperature of the driver and passenger before each trip.
- **Team working in home office**
The implementation of this way of work was already being taken into consideration and **was anticipated** because of the pandemic. At the moment we are currently studying the hiring of employees abroad, also in a remote system, to reinforce **our 24-hour services**.
